

## INDUSTRIAL DOOR – INCREASING THE STANDARD NUMBER OF CYCLES OF SPRINGS TO 20,000

Dear customer,

Allow us to announce to you that for the purchase orders of industrial doors received from 1 September 2016 onwards, we increase the minimum number of the cycles, for which the torsion springs are calculated, from the original 15,000 to 20,000 cycles. By this change, we respond to the trend of increasing the life cycle of the springs. At the same time, we unify the service life of springs of industrial doors with springs of our garage doors, where we have delivered torsion springs for 20,000 cycles as a standard for several years.

The change of the standard number of the cycles of springs has no impact on the basic price of the doors and, therefore, the springs for 20,000 cycles will be delivered without any extra surcharge.

Overview of surcharges for numbers of cycles of the torsion spring of TOORS INDY

20,000 cycles 0.00 €/pair of springs

50,000 cycles 114.50 €/pair of springs

100,000 cycles 311.20 €/pair of springs

However, the real number of cycles of the delivered springs is often higher than specified in the confirmation of the sales order. Therefore, we offer the possibility to you to find out the actual number of the cycles upon request for the projects, in which the real number of the cycles of the spring is important e.g. for tenders.
