

HINGES

Dear business partner,

In this Product Info, you will find a complete overview of supplied side and central hinges from zinc-plated steel for the TOORS Indy and Guardy doors. Those hinges have been in use since 01-02-2015. The overview is supplemented with the information about what hinges have been replaced with the new ones.

The currently used hinges are 5mm narrower; however, the positions of the holes for screws into panels have remained unchanged. For the service purposes, it is possible to use the current hinges even where the wider hinges were used, which means into the original holes in panels (it is not necessary to drill new holes). When individual parts are combined, it is necessary to comply with the compatibility of the hinge and guide roller.

As regards the newly supplied hinges, the guide roller is shaped differently, and it has larger holes for M8 screws.

The hinges supplied as the standard until 31-01-2015 will be available within supplies of spare parts until the end of 2015. The new hinges traditionally correspond, concerning their quality, to all standards. As regards hinges for the TOORS Guardy garage doors, they are further equipped with guide rollers with a plastic pad, which contributes to reducing the noise level of the doors (see Product Info 126).

SPECIFICATION

- New hinges
- New sets

TOORS INDY - Hoesch
T09-040-40-0045

TOORS GUARDY - FSP Hoesch
T09-040-40-0044
