

REVERSION OF TS970 CONTROL UNIT TO OUR PORTFOLIO

Dear customer,

hereby we would like to inform you about extending our control unit portfolio for GFA operators.

Respecting increased demand for TS970, which has been inovated in the meantime, we decided to include it back to our standard offer of control units for GFA operators. In case of sectional door configuration with power operation and with TS970, you can achieve up to 25% saving on the extra cost compared to usage of TS971.

Control Unit TS970 has one less relay and does not contain any integrated remote control receiver.

Control Units TS971 and TS981 still remain in our portfolio.
